UNIVERSITY LABORATORY AND PROJECTS

- **Web \ "www.braikeh.org"**

  This project was an online site - blog - for my country "braikeh". It contains all events and news about braikeh, including pictures and activities of clubs. The part data was developed using language PHP and SQL on cPanel including HTML5 and JavaScript. There was a part for the administrator, for editing, deleting and inserting new event per day.

- **Mobile application for clinic management system**

  This application was developed using android studio, Github and genymotion, and the data was stored using wamp PHP and phpmyadmin. It was contained information about patients and the doctors in a clinic, therefore, we have analyzed the results and managed it.

- **Mobile application for the management rooms and schedules at the faculty of sciences**

  The aim was to develop a mobile application for the management of rooms and the generation of schedules at the faculty of sciences. It was developed essentially to work under Android.

- **Web application \ shipping company cars**

  This site was my graduation project. This site web was being developed using PHP and SQL. it is carried out to facilitate the shipping of cars among the user. Indeed, the large part of the site is dynamic because the information and data presented are not fixed, on the contrary. It undergoes the necessary changes, which makes this site alive.
