Software Developer (Winnipeg, Manitoba)

CWB National Leasing

05/2017 – 09/2018

National Leasing, a member of the Canadian Western Bank Group of companies (CWB), is a commercial equipment leasing company as well as the largest Canadian lessor in small to midsize transactions. National Leasing has introduced many new innovations to Canada's leasing industry, including an electronic lease application process that assures rapid turn-around of customers' lease applications.

Through the Felix project, National Leasing has developed new systems that are flexible enough to meet changing business requirements in a timely fashion and create an environment that fosters innovation in systems and processes. The replacement of these core systems was delivered in three phases and utilized an Agile scrum methodology.

- Building web application pages and functionalities using Java 8, JSF Primefaces 4.0, Spring and Hibernate technologies.
- Working in an agile development:
  - Report status during stand up,
  - Schedule kick-offs for stories assigned.
- Providing estimates for assigned stories.
- Managing stories and issues using Jira.
- Creating data model for requirements.
- Reviewing Test Plans for assigned stories.
- Resolving Jira tickets issues.
- Developing unit test using Junit and PowerMock.
- Utilizing the Atlassian tools (Bamboo, Crucible, Jira) suite in the code review, building and deployment process.

Programmer / Analyst

Manitoba Blue Cross (Winnipeg, Manitoba)

08/2016 – 04/2017

Manitoba Blue Cross is an insurance provider company, headquarter in Winnipeg.

- Developed new applications in an agile environment starting by communicating with users to gather requirements to create a test plan and mock-up to understand the need of the software, then proceed with implementation. Software has to follow strict business rules and be developed while adhering to programming standards.
- Adding features to existing software, in which new features had to be implemented within a deadline while following the business standards of developing and releasing the newly coded addition.
- Created test plans for software in which brain storm sessions would have been held with the user(s), everyone would think of scenarios to test the software in order to develop it as flawless as possible.
- Drew mock-ups to have a good vision of what the user expects and what works best for their everyday usage.

- Code review was a standard procedure in which every code was reviewed by a colleague before it was released, within that procedure I have review colleagues code and gave thorough feedback on suggestions to improve the code.

Fort Garry Industries   *April 2014 – August 2016*
Programmer/Analyst (Winnipeg, Manitoba)

- Developed new applications from planning to implementation. Adhering to business rules and conditions provided by FGI's management and users, providing stable high-quality application.
- Re-wrote character-based applications transforming them into GUI, enhancing functionality and efficiency. Reading and understanding the application that has no documentation. Analysing how it works, documenting, redesigning then coding the application into modern more functional software.
- Developed systems in a team environment, cooperating in delivering high quality software through sharing ideas, reviewing progress, testing and setting next steps towards completing the task.
- Solved problems on daily basis, ones that block employees from completing their task such as errors in an invoicing or a purchase order program. Fixing the errors in timely fashion to remove such blocked tasks. On the other hand, investigated whether the error injected any garbage data in the database, if so then clean and adjust the data as it needed.
- I had convinced FGI's management to develop native mobile application as well as sophisticated web page to serve their salesmen in a better fashion. This is because of committing to always look for better technology for the business. I was put in charge of developing the two new projects, but unfortunately the business had decided to finish at a later time in order to finish more important tasks that were needed.
- Improved applications by communicating with users on everyday basis, taking their suggestions on what a software needed in order to be more user friendly.

EDUCATION & SPECIALIZED TRAINING

- ➢ **Computer Science Degree**
  University of Winnipeg, GPA above 3.0
  Successfully Completed in 2014

- ➢ Certified Scrum Master (CSM)

- ➢ Currently taking online course in:
  - Programming for Android handheld systems
  - Offensive Security Certified Professional (OSCP) certification
