Software Engineer

Lebanon- Dbaih 

SUMMARY

Experienced Software Engineer with a 3-year track record of delivering top-tier support to senior executives. Proficient in crafting and implementing robust software solutions, optimizing system performance, and collaborating effectively across teams. Strong communication and problem-solving skills with a commitment to excellence. Adaptable and able to work independently or as part of a collaborative development team.

EDUCATION

Lebanese University

Bachelor's Degree in Computer Science
2016 – 2019

- Familiarity with software development principles.
- Experience with data structures and algorithms.
- Hands-on experience with software development projects.
- Exposure to networking concepts such as TCP/IP, HTTP, and DNS.

Codi-Tech

Full Stack Web Development 2019 – 2020

- Web Technologies 101 - Grasp the basics of HTML, CSS, and JavaScript for frontend development.
- Backend Basics Bash, Dive into the fundamentals of backend development with PHP and Laravel.
- Database Dexterity, Gain a foundational understanding of databases, SQL, and schema design.
- Git Essentials, Learn the essentials of version control.

SKILLS

- PHP/Laravel
- Git
- Linux
- MySql
- Postgres
- Server-Side Architecture
- Redis (Caching)
- API Development
- CI/CD
- Pest (unit tests)
- Javascript
- Node js
- Livewire
- Filament
- Backpack
- VirtualBox
- Kali Linux
- PHPUnit

PROFESSIONAL EXPERIENCE

Backend Developer

Abiroot Digital | Jun 2023 - Nov 2023

- Design, implement, and manage databases, including creating efficient schemas and optimizing queries.
- Develop and maintain server-side logic for the application, ensuring optimal performance and responsiveness.
- Implement and enforce security measures, including data encryption, user authentication, and authorization protocols.
- Identify, debug, and fix issues in the backend code, providing timely solutions to maintain system reliability.
- Collaborate closely with frontend developers to integrate user-facing elements with server-side logic
- Steered projects with agility using Scrum methodologies, orchestrating daily meetings and sprints to enhance collaboration and productivity.
- Create and maintain technical documentation for the backend codebase, APIs, and databases.
- Tech Stack: PHP/Laravel, MySQL, Livewire, git, laravel blade, javascript, postgres, postman, Dbeaver, Docker.

Backend Developer

Globalistic Tech. | Mar 2022 - May 2023

- Design and implement scalable backend architecture using Laravel framework, ensuring reliability and performance.
- Develop and maintain RESTful APIs using JWT Tokens.
- Use version control systems (e.g., Git) effectively to manage code changes.
- Set up monitoring and logging tools to track system performance like, telescope, sentry.
- Implement security best practices, including data encryption protection against SQL injection, and prevention of other common vulnerabilities.
- Embrace Agile methodologies, participating in Agile ceremonies such as sprint planning, daily stand-ups, and sprint reviews.
- Configured and scheduled tasks using Laravel's task scheduler, automating routine processes within the application.
- Tech Stack: PHP/Laravel, MySQL, Microsoft azure, CI/CD, git, github actions, postgres, swagger, Dbeaver, Redis, rabbitMQ, Docker, Shell Scripts.

Backend Developer

Kerning Code (Netherlands) | July 2020 - Feb 2022

- Developed and maintained secure RESTful APIs, integrating JWT Tokens for enhanced authentication and authorization mechanisms.
 - Effectively utilized version control systems, specifically Git, to manage and coordinate code changes within the development team.
 - Actively participated in Agile methodologies, contributing to sprint planning, daily stand-ups, and sprint reviews to enhance project delivery.
 - Configured and optimized scheduled tasks through Laravel's task scheduler, streamlining routine processes for enhanced application efficiency.
 - Integration of data encryption protocols and preemptive defenses against SQL injection.
 - Established and configured comprehensive monitoring and logging tools, such as Telescope and Sentry.
 - Contributed significantly to documentation efforts by maintaining thorough records of security protocols, system configurations, and API specifications.
 - Tech Stack: PHP/Laravel, MySQL, AWS, CI/CD, git, gitlab, postgres, swagger, Docker.
-

Full Stack Web Developer

Integrated Digital Solutions | Jun 2019 -May 2020

- Designed and implemented a scalable backend architecture using the .NET Framework, ensuring reliability and optimal performance.
- Developed and maintained RESTful APIs, implementing security measures for authentication and authorization in the .NET environment.
- Implemented robust security measures, including data encryption, protection against common vulnerabilities, and adherence to best practices in the .NET and React Native ecosystems.
- Leveraged React Native for cross-platform mobile app development, ensuring a consistent and efficient user experience.
- Embraced Agile methodologies, actively participating in ceremonies like sprint planning, daily stand-ups, and sprint reviews.
- Effectively used version control systems, particularly Git, to manage code changes and facilitate collaborative development.
- Used Ignite CLI for rapid development and project scaffolding, providing a pre-configured boilerplate for React Native applications.
- Tech Stack: .Net Core, React native, MySQL, PHPMyAdmin, Expo Cli, Trello, gitLab, Mircosoft Virtual Box.
