Software Engineer | Lead Backend Developer | Python Developer

Summary

Experienced software engineer with 3+ of cross-industrial experience in delivering software projects across various sectors.

My strong programming and customer-facing background have a proven track record of delivering high-impact projects within web applications and services. I am extremely curious and driven. I love working in a collaborative way and challenging myself with new ideas and technologies.

Work experience

November 2019 -
Present

Software Engineer , Lead Backend Developer

Kodmus - Paris (Remote)

Interesting Project (Social media - game wise). Beta available for ios on Testflight (Invitation link available on demand !)

- Redesigned legacy code base following the software engineering principles ,wrote cleaner and reusable code , solved existing issues, and developed new features and algorithms using advanced data structures and modern OOP Design patterns.

- Constantly Cooperated with mobile and frontend developers to meet new requirements

- Managed Database modifications and rich RESTFUL Apis generation

- Documented 100% of API Endpoints (OpenApi)

- Maintained 90% tests coverage - unit tests , integration tests and regression tests

- Found and implemented 3rd party libraries and services

- Participated in the decisions making

- Maintained performance and integrated several services to analyze all endpoints

Technologies used : Django , Python ,Django rest framework , Docker-Compose , Kubernetes ,Celery , Redis , Google cloud platform

Feb 2018 -
November 2019

Full Stack Engineer

AkkarMedia

- Started as an intern and made my way up as a Full stack Django-React developer

- It took me 3 weeks to deliver my first Django project for a customer which was for elections results , <http://akkarvote.com/>

- Promoted within 6 months due to strong performance and organizational impact - ahead of schedule by 6 months , gained new management duties and managed several projects

- Proved my worth and became the essential player in the development department .

- Designed projects from mere Ideas to actual systems and occasionally led the dev team .

- Assigned tasks to other front end developers (Jira Software , Slack ..).

- Supervised and trained several junior developers and interns.

Technologies used : Django ,Python ,Django Rest Framework , PostgreSQL , MySQL,GraphQL ReactJS , Heroku , Amazon S3

Education

Bachelor of Science Computer Science

Lebanese International University

Graduated with 3.8 cumulative major gpa

Ranked first in my department

Participated in several academic activities and competitions , won elite student in programming award , ranked first in a programming competition held against universities and in a Robotics competition in my campus.

Advisor asking me to teach a third year an extracurricular course in web development.

Occasionally teach current students several professional topics and trainings

Skills

Web technologies

-
- Django
 - Flask
 - React
 - Nodejs

Stack

-
- Python
 - Javascript
 - REST Api
 - PostgreSQL
 - GraphQL
 - Redis
 - Celery

Services

-
- Heroku
 - GCP
 - AWS
 - Jenkins
 - Kubernetes
