---

**Objective:** To obtain an entry level position in Computer Engineering.

**Why Me:** When I was a child I enjoyed accompanying my father to work in the vegetable market. I worked from early morning until evening without getting tired or complaining. I took on the responsibility of working and making a living early on and throughout the years I gained the trust of everyone I worked with. Stepping into other workplaces, and during my work in the F&B, FMCG, and NGO sectors, I also made sure that my values and formula to success- which are building trust and good relationships with those I work with and being as accountable for my results as if the business was mine- would remain my lighthouse and motto in life. Today, I strive to complete my Computer Engineering degree and to get a chance to live and share my values of Trust and Good Relationship Building with a team I can succeed and progress with while gaining more experience.

**Skills:** Calm, Capable, Caring, Cautious, Confident, Dependable, Eager, Efficient, Generous, Get things done on time, Organised, Microsoft Office, HTML, CSS, Bootstrap, JS, Angular, NodeJs, Github, Sql, Byzantin Music.
