

Personal Statement

Lebanese American University graduate, I have a bachelor's degree in Architecture as well as considering pursuing a master's degree in Architectural engineering. The nature of the courses that we took required us to work on individual and group projects - and I excelled in both. I have learned how to be a great team player and take the lead when needed. Most of the projects were fast-paced and I always submitted the required deliverables on time. I am proficient in English, both written and spoken, and have experience working with Rhino, 3DS Max, and AutoCAD.

In addition to the academic life, I have been involved in the student work-study program to finance my studies. This required me to manage my time to perfectly balance my academic life. I have assumed different responsibilities during the work-study program, one of which was the administrative work at the Project Management and Contract Administration facility. My work under the direct supervision of the Senior Director of Capital and Construction Management further honed my skill by gaining valuable life learning experience.

I have 200 hours of professional work experience involving my bachelor's degree with Albani Engineering for Real Estate Development as an intern where my job role as an intern is conducting research on-site as well as performing bill of quantities tasks.

Education

Institution: Lebanese American University
Course: Bachelor of Architecture
Date of Completion: May-2022
GPA: 3.16/4

Institution: Al-Kawthar High School
Course: Year 12 Certification-Life Science.
Date of Completion: 2017
Year 12 Official Score: 17/ 20 – 40th on Lebanon

Key Skills

Communication and Presentation Skills

- Presented and explained the findings throughout university projects
- Communicated with group members throughout group projects as well as throughout my internship with Albani Engineering for Real Estate Development.

Time Management Skills

- Managed multiple university project and work.

Problem Solving Skills

- Understand the issue and troubleshooting to solve the problem.

Technical Skills

Architecture Technical Skills:

- Understanding of different visual effects programs such as Illustrator, Photoshop.
- Capability of using multiple architecture software's such as Rhino, 3Ds MAX, AutoCAD.
- Strong knowledge of different architectural concepts

Relevant Experience

On-site Internship | August 2021 – September 2021 | Albani Engineering for Real Estate Development- City Towers Project

I have undertaken an internship with Albani Engineering for Real Estate development where I assisted my supervisor with multiple tasks: -

My responsibility:

- Performed Bill of Quantity task where it requires calculating the number of materials required for a constructions site.
- Conducted research on construction sites.
- Assisted on creating Excel Sheets to illustrate all costs of materials required for the site.
- Worked in group projects with other interns to assist the supervisor complete technical tasks.

University Projects

- **Final Research Project & Final Year Project**

Ouzai urban sprawl is questioned starting from the article “Manifestation of Politics in Architectural Practice” to a thorough analysis of the site. Upon which a new master plan is generated.

This master plan aims to refresh the city’s social environment, where commercial and industrial activities could happen along with other extracurricular activities. Bringing together individuals, collectives, investors, and small-scale developers.

After proposing a new master plan, a plot was chosen for detailed architectural development. This lot has the potential to integrate these three functions (Produce-Live-Enjoy) as the existing typologies yet in a more developed and sensible way.

- **ARCH 532 DESIGN STUDIO VIII**

In ARCH 532 DESIGN STUDIO VIII I focused on researching the notion of collectiveness. We were required to analyse a selected site in Lebanon and to implement a design strategy that connect different communities.

- **ARCH 444 REGIONAL URBANISM**

The purpose of this course is to explore and study urbanism in a certain region. Throughout a group project my responsibility was to investigate and demonstrate the intangible heritage in the area, taking into consideration buildings, historic places, monuments, and artifacts as they are a cultural property. From this analysis I was able to suggest different urban solutions within the project.

Achievements

- ERGA Group Workshop completion (200 hrs)

Additional Employment

Administrative work at Lebanese American University 2017 - 2019

- Project management.
- Contract administration facility assistant.
- Student timetable assistance.
- Resolving different university student enquiries.

Extracurricular Activities

ERGA Group

June 2021 – July 2021

I have completed an Extra workshop with the ERGA Group where it involved project management principles, IT, Software development, Pre-Design, Quality management, Project design management, Regulation and permit, Design, AutoCAD, Revit, Civil Design, Electrical Design, Mechanical design, BOQ and specifications, Quality control, Contract administration, Material Approval.

Interests

- University Activities, Poetry, Artistic drawings, Weightlifting, Badminton and novel writing.
