Projects

- Final Year Project:
Designing a smart distribution network for gasoline in Lebanon to improve traceability and limit illegal smuggling, by focusing on the supply chain drivers and starting by simulating the current state of the distribution.
- Network Flow course Project:
Formulating a Capacitated Vehicle Routing Problem (CVRP) to optimize the FedEx delivery distribution all over Lebanon.
- Supply Chain Management course:
Analyzed the supply chain strategy of Unilever and explored its supply chain drivers. As well as forecasting the demand using different methods such as the static, winter and holt's methods. And providing recommendations that could possibly enhance Unilever sales.
