Current Modules:
IT automation with Python
Excel Advanced course

I am a high performing individual with a great amount of potential to grow, I enjoy leading teams and have a keen ability to train and educate staff on how to problem solve. I enjoy looking at trends, patterns and being able to find a creative opportunity.

I am currently looking to switch into the role of becoming a Data analyst, this role in the IT sector will give me the creative insight to seize opportunities in the market.

The perfect fit for me will be a company that will allow me to starting at the bottom with little to no experience and allow me to work my way up to becoming a senior analyst. As a highly motivated individual I have a lot to offer the company as well as the team.

I am currently in the process of my Bachelor of Commerce degree, a Python course and an advanced Excel course. I would personally love to specialize in data and stats while working with a company I can grow with. I am making a switch from agriculture to becoming a Data analyst.

I hope to go onto learn probability theory, SQL, Central tendency, Linear Algebra and Panda libraries

Sincerely,

Daniel De Bruin
