## Projects

---

### Academic Projects:

**Inventory system:** Using php, JavaScript, bootstrap, css and Database senior project, the user login, signup or reset password and can easily sell, delete, update, search and add items with picture, customer, vendor, purchase and print the report.

**Space shooter 2D Game:** Using C# language with Unity engine, user start the game and play, the user start to destroy with his/her ship enemy ship that is trying to destroy the user ship with bullets that follow the user ship position, also user destroy falling meteor, if the user destroy meteor a 50 point add to his/her score bar at the top left corner of screen and if he/she destroy the enemy ship a 100 score will be added, moreover the user have health bar too and health object every time the user take it a 25% will be added to health bar, and when the user loose he/she restart the game.

**Pharmacy system:** Using C# language and MySQL database, with visual studio, I have built a pharmacy system for desktop apps, the user can add, update and delete new medical product, also calculate the total purchased product of the customers.

**Guess The Animals app:** Using java language and MySQL database, with android studio, it is a native android app where the user login, signup. The user start the game and guess the animals in the picture with multiple animals name that already listed, if the user chose the right answer another picture load to guess.

**Data Entry system:** Using VBA excel, I have created a data entry system that can manipulate data by add, delete, update and search product for industrial company.
