

## JOE ABOUD

**OBJECTIVE** Finding a suitable internship opportunity in data science, or any relevant field at your reputable company, one of the most renowned organizations in the field of advanced technology. Throughout my first two years at the university, I was taught valuable skills that could benefit the company.

I am deeply interested in statistics, programming, and analytics. As a data science student, I am required to be skilled at understanding algorithms, Java, R and Python toolkits, and be well-versed with SQL and applied statistics. Therefore, I am looking forward to using my academic knowledge and handle projects independently.

---
