PERSONAL/UNIVERSITY PROJECTS

Arduino Project (10/2019 - 01/2020)

- A small car, coded on Arduino IDE from scratch, fully working using sensors and motors. Can be controlled via a specific mobile application and Bluetooth, and at the same time autonomously with obstacles through the sensors.

Software Applications and Design Project (02/2021 - 06/2021)

- A small COVID-19 laboratory system, patients registering for the test, getting all their personal information and returning their PCR results, done on NetBeans.

Senior Project - Mobile Application (03/2022 - 06/2022)

- A car meet application where people can add car meets on a map, providing time and date, setting up drag races with other users, done on Android Studio.
