

MOHAMAD FAKIH

PROFILE

Lebanese university computer science graduate. I have a strong passion for programming and find it as something that's fun and brings me joy, not just a career path. I love learning new skills and becoming the best version of myself both in this domain and in my life.

EXPERIENCE

2023 - Present **Kamkalima**
Beirut
Mobile Developer, Flutter (Internship)
I was responsible for maintaining the Kamkalima mobile app on both Android and IOS. This includes fixing bugs, adding new features, releasing app updates to the store, and working with a team of developers with specified deadlines and responsibilities.

I was also trusted with different web development tasks both frontend and backend. Contributing to the Kamkalima website too.

EDUCATION

2020 - 2023 **Bachelor's degree in Computer Science**
Lebanese University, Hadath

2019 - 2020 **Lebanese Baccalaureate (General Sciences)**
Hussein Ali Nasser

PROJECTS

2023 - Present

TECHX

A tech Ecommerce Personal app project made with the Flutter framework that implements the following concepts:

- Clean Code Architecture
- State management
- Dependency injection
- Firebase
- Git and branch management
- Responsive design with animations
- CPU handling

And much more

2023

FLUTTER GROUP CHAT

An app made with **Dart/Flutter and Firebase** where users can create/join groups and chat with one another. The app uses advanced techniques such as creating groups and managing users in groups, admin permissions, Firebase database, and much more.

🔗 https://github.com/MohamadsFakih/Flutter_Group_Chat

2023

BOOK CLUB

An application built with **Dart/Flutter and Firebase** that will allow bookworms to create a group and read books together in certain time frame.

First users must sign up/register which they can do via email and password or through their google account.

Users can discuss and rate the book after the book due time has ended, and view other ratings as well in the books history.

The group admin can change the current book, remove members from the group, delete the group, and several other security permissions which are not provided to normal users.

When adding a book, users can search for the desired book by using an API or add their own manually.
