OBJECTIVE

A skilled software developer with a Bachelor's degree in Computer Science and expertise in backend and frontend development. Seeking a challenging software developer role that leverages my skills and knowledge to build innovative software solutions.

ACADEMIC QUALIFICATIONS

- **Lebanese International University, Computer science** Bachelor Degree, 2020

SKILLS

- Backend: PHP, Asp.Net, Java
- Frontend: Angular, React, HTML, JavaScript, jQuery, CSS, Bootstrap, WordPress
- Database: SQL, MySQL

WORK EXPERIENCE

Software Developer (Freelance) Dragon Trade (March 2023)

- Designed and developed a trading website using PHP and MySQL, which enables users to register, login, and subscribe to different packages
- Implemented features such as balance checks, deposit history tracking, and profit calculations

Software Developer (Freelance) VIP International Services (February 2023 - March 2023)

- Developed a recruitment agency website with features such as login, register, job search, apply form, and contact us form using PHP and MySQL

Software Developer (Freelance) Airlines Chatbot (February 2022 - January 2023)

- Developed a chatbot using IBM Watson and JavaScript that allows users to upgrade, check-in, or check their flight status
- Integrated the chatbot with Google Sheets to store user data

Software Developer (Johnson Luke) RTA-Mahboub Chatbot (March 2021 - January 2022)

- Deployed and trained a chatbot on IBM Watson that answers questions from users regarding governmental services

CERTIFICATES EARNED

- IT essentials: PC hardware and software course from Cisco Network Academy 2019
- Introduction to networks from Cisco Network Academy 2020
- Routing and switching essentials from Cisco Network Academy 2020
- Computer science workshop and completed an introductory level session in unity game engine 2017

PROJECTS EXPERIENCE

- Senior project: “Key Chain Location”: This project is about finding your key chain or any device you lost by linking a chip that detects your location with the device you want. My responsibility was to link the location device to the website so that the user when logging in can find the location of the item he lost. This project was made using PHP language. 2020
- Gulum: A clothing website where the can login and view items. Also the admin can login, add, delete, and update information. This project was created using PHP language. 2020
- LastPass: An application that allows the user to login and save all the information he wants. 2020

SKILLS

- Excellent communication and teamwork skills
- Proficient in English and Arabic
