SUMMARY

Passionate web developer with over 3 years of professional experience creating responsive websites with great user experiences. Skilled in HTML, CSS, and JavaScript, with a strong focus on creating modern, visually appealing websites that are both functional and intuitive. Proven track record of working collaboratively with clients and teams to deliver high-quality results within tight deadlines.

EXPERIENCE

| | |
|---------------------------------|-------------------|
| Front End Angular Web Developer | 04/2023 - Present |
| NextCare | Beirut, Lebanon |

NextCare is a Third-Party Administrator (TPA) that provides services to insurance companies in more than 32 countries worldwide. As a TPA, this company acts as an intermediary between insurance companies and their policyholders, handling various administrative and claims processing functions on behalf of the insurance companies.

- Agile methodology: Working in an agile environment involves following an iterative approach to software development, which allows teams to respond quickly to changing requirements and customer feedback. This involves breaking down larger projects into smaller, manageable tasks, prioritizing them based on customer value, and working in short sprints to deliver working software on a regular basis.
- Angular 14+: Angular is a popular front-end framework for building complex, single-page web applications. It provides a robust set of tools and features for building scalable, maintainable applications that can be easily tested and deployed. The latest version of Angular, Angular 14+, includes a range of new features and improvements, such as improved performance, enhanced accessibility, and better support for internationalization.
- GitLab/GitHub/Jira: GitLab, GitHub, and Jira are all popular tools used in agile software development. GitLab and GitHub are code hosting platforms that allow developers to store, manage, and collaborate on code repositories. Jira is a project management tool that helps teams track progress, manage tasks, and communicate effectively. These tools can be integrated with each other and with other development tools to create a seamless development workflow.
- RxJS, SCSS, and TypeScript: RxJS is a library for reactive programming in JavaScript, which allows developers to build complex event-driven applications. SCSS is a CSS preprocessor that allows developers to write CSS in a more modular and maintainable way. TypeScript is a superset of JavaScript that adds static typing and other features to make it easier to build large-scale applications. These technologies can all be used with Angular to build powerful, scalable applications that are easy to maintain and extend.
