Project:

Web Application:

- 1- Front End web application to Gym using HTML5, CSS, and JS.

Present to the user information about the gym and a page for contacts.

2- Front End and Back End web application to Hotel using Html5, CSS, JS, and PHP.

Present to the user information about the hotel, rooms, and restaurant with an account management system (create acc, type of acc, login, logout, signup, update acc, delete acc...), booking system, database using Xampp ...

Desktop Application:

1- Create a desktop application for a vending machine to rent movies (AV2023) using JavaFX Framework.

Present to the user the movie list and their details in the machine, and with GUI design patterns, log in using a subscription card and credit card (ask for subscription card, ask for a specific movie, show user history, admin page to manage all data, check in the movie is damaged, recover page to return a rented movie, etc...), Xampp for database, Scenebuilder for the interface, NetBeans for JavaFX...

Database:

- 1- Creating the database for the Hotel (web app) with multiple tables and multiple triggers and functions for managing the data.
- 2- Creating the database for AV2023 (desktop app) with multiple tables.
