

Dear Hiring Manager,

I am writing to convey my strong interest in the junior consultant job opening. I first became aware of Euromena consulting while searching for internship positions at BDD. After having searched the company extensively, I became impressed by Euromena's regional expertise, track record of successful projects and satisfied clients around the world and positive impact on businesses. I am an industrial engineering graduate from AUB, where I have learned a lot about management and grown as a person and leader. However, what truly distinguishes me is my passion for coming up with solutions to challenging issues and my desire to make a positive impact on my surroundings.

During my summer supply chain internship at CMA-CGM, I gained experience in market research analysis and warehouse operations. This experience, coupled with my studies in industrial engineering, has provided me with the knowledge and skills required to succeed in a consulting position. I have demonstrated my ability to apply theory to real-life problems through my different university projects and my final year project, "Improving the Operations of Benta Pharmaceuticals Industry (BPI) in Lebanon," where I lead the groups on most of my projects. In addition to my technical abilities, I have the qualities needed for success in a consulting job, including motivation, an achiever's mindset, and leadership skills. These abilities are further attested to by my membership in the investment club and my inclusion on the dean's honor list.

I have also been exposed to a variety of backgrounds and experiences through my volunteer work with unprivileged children and extracurricular activities such as sports, which enabled me to connect with customers from a variety of industries. As an Arab woman, I am committed to achieving success and opening doors for other women in my community. By working with customers from a variety of industries to solve complex business challenges, consulting could also provide me with the opportunity to put my talents and interests to use in a stimulating and demanding setting.

As an industrial engineering graduate, working at Euromena provides me with the opportunity to embrace my values and thrive in a multicultural environment as it has projects all over the MENA region. My aspirations to work in a company that creates a positive difference truly align with Euromena's reputation. I am excited to apply my skills to create positive change and impactful solutions by embracing the company's emphasis on leadership, responsibility, and creative problem-solving.

Thank you for considering my application. I look forward to the opportunity to discuss my qualifications further and how I can contribute to Euromena's development.

Sincerely,

Marie Yared
