## EXPERIENCE

---

Junior Frontend Developer | Anywr - Lille, France (Freelance Remotely)

Oct 2022 - Present

- Develop and implement user interfaces for web applications using Vue.js, adhering to best practices in frontend development.
- Collaborate with cross-functional teams to gather requirements and translate them into technical solutions.
- Optimize application performance and responsiveness, ensuring seamless user experiences across various devices.
- Participate in code reviews, troubleshooting, and debugging to maintain high-quality code standards.
- Contribute to the planning and execution of new features, providing insights and recommendations for frontend architecture improvements.

## Projects

---

Private Tutoring | Android Application (University Senior Project)

Designed and implemented an android application that would be offering the best teachers for students, a new way of connecting people who are interested to get a tutoring job for their financial help. Implemented on Android studio, using java as programming language, and storing data in firebase.
