COLLEGE PROJECTS

CV Pro
- The project is a front-end and back-end-developed system. It helps the user create their resume by offering them a range of configurable templates. Users are able to enter their personal information and choose the appropriate template for their expertise and credentials. Then, the website will develop a polished and professional resume that can be downloaded or shared with potential employers.

Medical Center Management System
- This project is a desktop application that aims to manage and organize the number of patients, staff, and doctors in the medical center. Moreover, it helps the secretary choose a suitable appointment for both the patient and the doctor in less time.

Sorted Perfect Number DLL
- The project involved developing a class named LPN that utilized a doubly linked list to manage a sorted list of perfect numbers. The project showcased my proficiency in C++ programming, data structures, and algorithmic design.

The Perilous Path
- A game desktop application that aims to entertain the user.

Tourism Website
- It is a dynamic website that guides the user during his journey. It gives the user the option to choose the best flight, hotel, and car.
