PROJECTS

- **Tasheel App** | Flutter, Dart, Firebase, laravel for backend

March 2024

My graduation project , I created more than 35 pages and I dealt with more than 30 Package and the app has many features such as adding Payment integration(Stripe), renting Houses and find a Jobs opportunity ,wich includes click for favorites, display more details, contact by whatsapp or sms ,and search with filtering by salary and location, there are also login and signup with authentications and much more features.

- **Chat App** | Flutter, Dart

Real-time chat application using Firebase to enable seamless communication between users.

- **Note App** | Flutter, Dart

User-friendly note-taking application leverages local storage(Hive) to allow users to save and access their notes.

- **Weather APP** | Flutter, API integration

Its an application that allows the user to search the weather of any city using API integration: weatherapi.com.

- **STORE APP** | Flutter, API

The application is responsible for showing many products which are stored in an API.User can view product details, Add or delete a product in the Cart.
