PROJECTS

Smile!

📅 09/2022 - 05/2023 📍 BAU

Python based Face Recognition System

- Integrated face recognition system on Instructor laptops - Smart Network Cameras.
- React Website for attendance, warnings, notes of absence of students, edit attendance/absence.
- Machine Learning to detect Phones / Printed Photos.
- Hosted online in order to run on all laptops.
- Firebase database fully integrated into the University along with moodle.

Pharmacy database

Branched Pharmacy System

- The first branch for the pharmacist to check the stock of the medicine and place orders.
- Second branch each doctor prescriptions filled is scanned and placed in the database for future reference.
- Third branch for customers to check if a certain medicine is in stock or not with prices and quantity available.

Restaurant GUI

- **GUI Design:** Design a user-friendly GUI for the restaurant menu using JavaFX components such as buttons, labels, and choice boxes.
- **Order Selection:** Allow users to select items from the menu by clicking on buttons or using choice boxes.
- **Receipt Generation:** Create a receipt section that dynamically updates as users add items to their order.
- **Takeaway Option:** Implement a takeaway option that users can select if they want their order to be packed for takeaway.
- **Currency Converter:** Integrate a currency converter to allow foreigners to view prices in their preferred currency.
