PROJECTS

Map Your Nap, React js - node js - mongoDB
A senior project, to manage the process of booking rooms to rest. This website is for the people who drive for long distances. There are two types of users. Admin, he/she can add/delete rooms, the room has a location(shown in map), country name, images and description. The second user type is user, they can search for rooms in the website, see suggestions from the website for the best rooms for them (depending on the location and country of the user). They can book a room. And much more features and technologies in the website, with the use of a lot of libraries that helped to be a professional website.

Book Sharing, React js - node js - mongoDB
A website to share books with others, the user can follow other users. And send them a suggestions of his/her best books to read. User can like books, add them to favorite.

Instagram Clone, React js - Laravel
A website to clone the instagram website. Cloning the follow users, see following user's posts, and like posts
