Projects

- Senior Project Android Talking About assist Liu students across all majors and campuses in Lebanon in finding suitable jobs or internships based on their skills and goals quickly and professionally. It will help Liu students prepare for job applications and interviews, making the job search process more efficient. Additionally, the app will allow instructors to post job opportunities based on their community relations, expanding students' job search options. Companies can also post their job opportunities on the app, that's will create a community and relations between Liu students Liu University companies and business owner project link: <https://github.com/Ahmadaz3/LIUJOBFINDERAndroidApp.git>
- Web project using Html CSS and PHP about food ordering and food review Project link: <https://github.com/Ahmadaz3/onlinefoodorder.git>
- Desktop Windows Application for Alshefaa Association Management System is a desktop application designed to help centers across Lebanon manage their work. It tracks monthly expenses, handles emergency cases, manages volunteer information, and generates reports on center activities. The system streamlines administrative tasks, saves time and effort, and provides essential information that can help centers operate more efficiently and effectively and more features the project may project link: <https://github.com/Ahmadaz3/AlshfeaaAhmadAzimehProject.git>
- Software engineering Project to design the analysis and requirements for every project the project talking about the goal is to build a safe reliable place to provide honest, fast, and easy elections in all departments and fields in a company or charity. The voting system will be built to enter the data of every single employee or volunteer and scan their fingerprints, schedule a voting event and provide the result of it. Such a program will save time, and money, and enhance the security and honesty of the voting process in the companies and charities. The traditional elections complication will be transferred into a click by the admin and voters. moreover, the process of counting votes will be short cut from days to minutes by the automated votes counter.
- 2D Unity Game Project: A 2D game centered around the player who is trying to reach the princess and runs into a lot of danger on his way Project Link: <https://github.com/Ahmadaz3/2DUNITYGAMEAzimeh.git>
- 3D Unity Game Project: 3D game is Designed from 0 centered about shooting collecting ammos and enemy follow using Ai. project link: <https://github.com/Ahmadaz3/3DGameAhmadAz>

Certifications

- Computer Science Degree from Lebanese international university
- CCNA (Cisco Certified Network Associate)
- CS50 introduction to Computer Science
- Deans Honor list 3 semester's
