EXPERIENCE

Main Projects

1. **Front-End Website for a financial application (under construction)**

   - Designed and implemented the front-end architecture using React.js, following the best practices for modularity and maintainability.
   - Implemented features such as adding index investment option, adding index to favorites tab in profile section, and viewing dynamic values of indices represented via charts.js.
   - Conducted thorough testing and quality assurance to ensure reliability and performance.
   - Utilized custom hooks to increase reusability and remove redundant code.
   - Created a registration and payment system as well as a financial news page.
   - Uniquely stylized the application using Tailwind CSS, Bootstrap CSS, and SASS.

2. **Weather App**

   - Creation of a weather website using HTML5, CSS3, and vanilla JavaScript.
   - Implementation of the open weather API.
   - Fetch of city weather details and display on the website using the API

3. **Image Gallery**

   - Image gallery showcasing different images in boxes with style and animations and a toggle theme button, using HTML5, CSS3, and vanilla JavaScript.
