

To Whom it may concern,

As someone who has always been fascinated by the world of software engineering, I began my coding journey two years prior to enrolling at the Lebanese American University. It has been a great experience so far, validating that this field is truly where my interest lies.

In my academic journey, I have learned that I bring a unique 'bird's eye' perspective to the table, and that I have a natural inclination towards structured planning. My strength lies in logical thinking and the ability to create a solid structure for projects. I also have learned roadblocks are an inevitability, but as I am sure it is with life and work, you must adapt.

I recognize that the next step at this stage is to start applying what I've learned and see how it all comes together in the real world. Which is why I'm eager to secure this internship at your firm, as it presents an opportunity to learn , especially when it comes to the latest technologies and contemporary methods of implementation and structural design.

Thank you for considering my application and I look forward to having an opportunity in becoming an intern at your company.

Thank You

Regards,

Karim Itani

EDUCATION

Sep 2022-Present	Lebanese American University Bachelor of Science in Computer Science GPA:3
2007-2022	Ras Beirut International School Life Sciences

EXPERINCE

Sep 2023	Teaching assistant Contributed to teaching first year Computer Science students at the Lebanese American University
----------	--

PROJECTS

May 2024	Restaurant website “La Monet” Developed a fully functional and dynamic website for "La Monet," a restaurant, featuring user login for online ordering and an integrated loyalty program. The website also includes a client view for users who wish to browse the menu without logging in.
May 2024	Chef personal Display Website Created a fully functional and dynamic website for a chef to showcase his platters. Visitors can submit reviews and view platters, while the admin login allows the chef to add new dishes and manage their visibility by activating or deactivating them.

Dec 2023

Password Strength Checker Website

Evaluates the password entered in the website using an AI model created with Python (TensorFlow).

May 2023

Barnej Bel Lebneleh (compiler)

A newly constructed programming language that complies the language and outputs in assembly code

Sep 2022

Runner Game

Basic runner game in a 2D environment created with Python(pygame).

SKILLS

Languages:

Java, C, Python, HTML, PHP, JavaScript, SQL, CSS, arm v8.

Developer Tools

VSC, VS, Eclipse, IntelliJ, Spyder.

Operating Systems

Windows, Kali Linux
