## PROJECTS

### POS System (Point Of Sale System)

A web application designed to streamline and enhance the sales process for SMEs., providing a centralized platform to manage transactions, inventory, customer data, and reporting

### QR Menu

The QR Menu project is a modern solution designed to enhance the dining experience for restaurant owners. Leveraging the convenience and accessibility of QR codes. This project aims to revolutionize the way customers interact with menus by digitizing the menu and making it accessible via smartphones and tablets.

### Registration Platform

Simplifying the registration process of conference attendees. This system serves as a comprehensive solution for event organizers, providing a seamless user-friendly registration experience.

### Inspection Platform

An inspection platform which serves as a comprehensive solution designed to streamline and optimize the monitoring process of oil and gas within the industry.
