08/2020 - 09/2020

## PROJECTS

- **Website for organ and blood donation 2021**
  - Developed a dynamic e-commerce website using HTML, CSS, and JavaScript.
  - Implemented responsive design and front-end functionality.
- **Software Engineer Report for home services software 2023**
  - Designed using use case, class, and sequence diagrams.
- **DataBase project about University Management System 2024**
  - Features three user roles: student, teacher, and admin.
  - Admins can perform CRUD operations on students, teachers, and exams.
  - Teachers can update grades and view their courses.
  - Students can view their registered courses and grades.
- **Website for a Musical Academy 2024**
  - Supports two user roles: admin and student.
  - Admins can add students, musical instruments, musical classes, and manage scheduling. They can also view all registration details.
  - Students can register for musical classes, select suitable times and instruments, add them to the cart, and view their registration details.
  - Built using PHP, HTML, CSS, and Apache.
