SUMMARY

Grounded **Technical Consultant** with a determined mindset. Strong understanding about data management and data analysis, enthusiastic about Blockchain and proven to communicate effectively with clients and colleagues.

EXPERIENCE

Technical Consultant

Lyst Technologies - Solidaire Bank Congo

January 2022 - Present, Kinshasa Congo

- Integrated payment platforms such as Automated Clearing House (ACH), SWIFT, Africell, credit/debit cards (CSC), and RTGS into software using API calls, querying data, and configuring settings to ensure interoperability.
- Implemented and configured the loan module by gathering requirements from the respective department and management, tracking progress with the development team in India through follow-up tickets. Conducted rigorous testing in the UAT environment before production deployment, with all configurations documented for future reference.
- Delivered technical guidance to stakeholders by simplifying technical concepts and presenting them in business-friendly terms through presentations and discussions.
- Managed project progress through regular follow-ups, ensuring timely delivery and client satisfaction.
- Delivered on-site support to identify and resolve bugs under pressure, minimizing disruptions to banking operations and maintaining system stability.

Full Stack Developer

Synergies

May 2020 - November 2022

- Migrated the software from Ionic 3 to Ionic 6 by utilizing Angular, NodeJS, Electron, and Regex to update and refactor the codebase. Ensure compatibility with the new framework version, for better performance and maintainability.
- Developed and secured a Java Spring Boot (MVC) application by implementing JWT tokens for authentication and encrypting passwords in the database. Created APIs to handle CRUD operations.
- Developed a mobile banking application for reconciliation, utilized HTML, CSS, Javascript and REST API's.

PROJECTS

Mining Farm - Bitcoin

Municipality of Beit Chabab • May 2021 - Present

- ASIC Mining farm, fully automated and configured.

Crypto arbitrage bot - Python 3

Notre Dame University • February 2021 - June 2021
