Professional Summary

Curious Software Engineering Student with strong problem-solving, adaptability, and communication skills, ready to bring my skills to a real-world internship. I'm the kind of person who beyond university, is always digging into online resources to learn more, but I know an internship will teach me what I can't get alone.

I have built my technical expertise through self-learning and hands-on projects, while volunteering has strengthened my teamwork, empathy, and ability to work in diverse environments. I want to grow into a sharp engineer-quick at fixing things and making them better-because that's the me I'm building toward.
