Professional Experience

Layout International — *Senior Backend Developer – Newspublish Software*
2016 – Present

- Develop and maintain enterprise-level publishing software used by major clients.
- Architect and implement scalable backend solutions using PHP and Laravel.
- Collaborate with frontend teams working with Vue.js and React to ensure seamless integration.
- Participate in internal planning meetings and client calls to gather requirements, provide technical insights, and track progress.

- Communicate regularly with the DevOps team to optimize CI/CD pipelines and streamline deployment workflows.
- Manage Git repositories: perform branch cleanup, cloning, merging, and environment setup for development.
- Provide technical guidance and support to new developers and trainees during onboarding.
- Review code for quality, performance, and maintainability, ensuring best practices are followed across the team.
- Contribute to architectural discussions and participate in defining standards for backend development.

Standards HR Consulting, Verdun (2015)
Web Application Developer (Backend & Frontend)

- Developed and maintained HR-focused web applications.
- Designed secure APIs and robust database structures.

ACI, Corniche Mazraa (2011 – 2015)
