## Objective

Motivated Backend & Full Stack Developer Experienced with Spring Boot, Angular, RESTful APIs, and SQL/MongoDB databases. Looking for a role where I can build scalable backend services, contribute to full-stack features, and continue growing within a professional, high-impact development team.

## Skills

- Languages: Java, JavaScript, PHP, C#, SQL, C
- Frameworks & Libraries: Spring Boot, Angular, Node.js, Express, ASP.NET Core, Bootstrap 5
- Database Systems: MySQL, MongoDB
- Tools: GitHub, Bitbucket, Postman, JIRA
- Core Concepts: OOP, Data Structures & Algorithms, Design Patterns, Complexity Analysis
- Languages: Arabic (Native), English (Intermediate)

## Certificates

### • Spring Boot 3 – Chad Darby (Udemy)

Completed – 35 hours, 2025. Covered Spring Core, REST, MVC, Security, Thymeleaf, JPA, Hibernate, and MySQL. Built secure Java backend apps with authentication, APIs, and database connectivity.

### • The Complete 2025 Web Development Bootcamp – Dr. Angela Yu (Udemy)

Completed – 62 hours, 2025. Full-stack course covering HTML, CSS, JavaScript, Node.js, Express, and MongoDB. Delivered multiple full-stack projects with authentication and Git-based deployment.

## Projects

### SaaS Subscription Management System (Internship Project at Cloudlinks.ai)

April 2025 – July 2025

- Developed backend services for a complete subscription-based application using Spring Boot, Spring Security, and MongoDB
- Built features for plan creation, user subscription, tenant-based access control, and invoice generation
- Implemented role-based security (Admin, Customer, and Delivery roles) and JWT-based authentication
- Designed scalable RESTful APIs and integrated them with the frontend and dashboard views

## Work Experience

### Full-Stack Developer & SQL Administrator – 800 Storage

September 2025 – Present

- Building and maintaining internal business and logistics features across the full stack using Java/Spring Boot (backend) and Angular (frontend).
- Implementing Angular pages and components using the company's predefined UI component library, connecting them to RESTful APIs.
- Designing and optimizing SQL queries, joins, and views to support reporting, billing, and operational dashboards.
- Performing SQL database administration tasks, including indexing, performance tuning, and data integrity checks.
- Collaborating with backend, frontend, and operations teams to ensure clean data flow and correct integrations.
- Debugging and improving existing backend and frontend features, focusing on reliability, security, and maintainability.

## Education

Oct 21 – June 25

Lebanese University

Bachelor of Science in Computer Science

Beirut, Lebanon
