Profile

Results driven Full stack Software Engineer with 4 years of experience building scalable and efficient web applications across the full software development lifecycle. Proficient in C#, .NET Core, React Js/Ts, React Native (iOS/Android), SQL Server, HTML/CSS. I excel at optimizing business processes and delivering robust solutions. I combine strong technical acumen with excellent client communication, ready to drive innovation and impact in dynamic environments.

Work Experience

Software Engineer at ITG Holding   Jan 2023 – Present

- Developed a reusable .NET Core and ReactJS web application framework, enabling seamless integration of modules and reducing new project development time by 40%.
- Launched a FinTech initiative focused on managing service payments that onboarded new vendors, streamlining payment process, managing user wallet and enhancing overall operational efficiency.
- Customized Microsoft D365 Business Central and Finance & Operations ERP solutions using X++ and AL, translating client requirements into optimized functionalities.
- Facilitated Agile project workflows, defining business processes from use cases, providing precise estimations, and maintaining continuous client communication in TFS/Git.
- Mentored interns and new joiners, providing task oversight, and code reviews; led development of a Collector Mobile App to help drivers calculate and manage customer collection targets. Delivered successfully by the end of the internship period.

Software Engineer at Soft Flow Group   Oct 2021 – Dec 2022

- Integrated and developed business solutions across MS SharePoint, Dynamics 365 CRM (Sales Hub), and Power Automate, leveraging DFFS and JavaScript.
- Developed and implemented a full-lifecycle HRMS system in .NET (C#), encompassing payroll, HR management, asset tracking, and performance metrics.
- Developed and optimize SQL queries, stored procedures, and functions to enhance data retrieval and manipulation.
