## PROFILE

Full-Stack Developer with hands-on experience building production e-commerce platforms, mobile applications, and backend systems. Proficient in Laravel, Flutter, and Node.js with a track record of delivering client projects from requirements to deployment. Seeking opportunities to contribute technical expertise and problem-solving skills to innovative software projects.

---

## PROFESSIONAL EXPERIENCE

### Full-Stack Developer

2025

#### Maarouf Market E-commerce (Freelance)

Saida, Lebanon

- Collaborated with a developer to engineer a production-ready e-commerce platform using Laravel and MySQL, personally leading all administrative functionality and backend architecture
- Architected and built the complete admin panel from scratch, including product/category management, dynamic pricing controls, inventory tracking, and reporting dashboards
- Designed and implemented secure authentication system with role-based access control (RBAC) for multi-level administrative users using Laravel's built-in authentication
- Developed controllers, routes, and Blade templates for all administrative features while maintaining a shared database structure for seamless platform integration
- Optimized database performance through normalized design, automated backup protocols, and migration strategies to maintain system reliability

### Flutter Developer (Freelance)

2026

#### Daily Dose Corporation – Invoicely (Custom Invoicing Application)

Saida, Lebanon

- Designed and developed a custom invoicing application from detailed client requirements, delivering a cross-platform app for Android, iOS, Web, and Desktop.
- Translated business workflows into a scalable Flutter architecture, enabling future features such as reporting and client management.
- Implemented secure authentication with Firebase Authentication and real-time data storage using Cloud Firestore.

### Backend Developer Intern

March 2025 – Sep 2025

#### Xpert Bot

Remote

- Completed intensive internship specializing in Laravel backend development and version control with Git/GitHub
- Independently developed the BabiWaka Project, implementing backend logic, authentication systems, and database integration using MySQL
- Built core features including user authentication, database migrations, and CRUD operations using Laravel's MVC architecture and Eloquent ORM
- Applied version control best practices by managing the project repository on GitHub with proper commit history and documentation

### Mobile Development Intern (Flutter Developer)

Jul 2025 – Aug 2025

#### Laptop Company

Saida, Lebanon

- Completed intensive 40-day internship specializing in cross-platform mobile application development using Flutter and Dart
- Built a fully functional real-time chat application with Firebase Authentication for secure user login and Firebase Realtime Database for instant message synchronization
- Implemented responsive UI components, and real-time data listeners for seamless user experience
- Developed core features including user registration, profile management, message threading, and persistent chat history storage

**Hlalyieh Market**

Saida, Lebanon

- Manage comprehensive accounting operations, processing daily transactions, maintaining accurate financial records, and ensuring compliance with accounting standards
- Prepare detailed monthly financial reports analyzing revenue, expenses, and profitability trends to support business decision-making
- Track and reconcile invoices, receipts, and expenses while monitoring budget adherence to maintain financial accuracy and identify cost-saving opportunities
- Maintain organized documentation and perform regular audits to ensure data integrity and timely reporting

**EDUCATION**

---

**Bachelor in Business Computer**

Expected: 2026

Lebanese University

**Lebanese Baccaalaureate in Life Science**

2022

Bizri High School

**PROJECTS & ACHIEVEMENTS**

---

**Stock Control System (Full-Stack – Backend Focused)**

- Designed and implemented a RESTful API using Node.js to manage inventory operations, product pricing, and purchase workflow
- Architected backend business logic for stock tracking, price updates, and automated purchase order processing
- Structured database models to ensure data integrity and efficient inventory queries
- Implemented real-time update mechanisms to synchronize stock changes across clients
- Built the system to translate real-world business processes into scalable backend logic

**Tech Stack:** Node.js, REST APIs, SQL, Flutter (Client)**Points System App**

- Developed a Windows Forms–based customer loyalty and points management system using C# and SQL Server
- Implemented automated data extraction using UI Automation to collect transaction data from external applications
- Designed backend logic to calculate, store, and update customer reward points accurately
- Integrated the system with existing business workflows without modifying the external applications
- Delivered a reliable solution that improved loyalty tracking and reduced manual data entry

**Tech Stack:** C#, .NET (Windows Forms), SQL Server, UI Automation**TECHNICAL SKILLS**

---

**Languages**

Dart, JavaScript, PHP, C#, HTML, CSS, SQL, C, Java

**Frameworks & Tools**

Flutter, Laravel, Node.js, .NET Core, Firebase, Git/GitHub, jQuery

**Architecture & Patterns**

RESTful APIs, Real-time Data Sync, Clean Code, Authentication Systems

**Database & Storage**

Firebase Firestore, MySQL, SQL Server, Real-time Databases

**SOFT SKILLS**

---

- Problem Solving
- Critical Thinking
- Team Collaboration
- Technical Communication
- Project Management

**LANGUAGES**

---

- Arabic: Native
- English: Fluent
