PROJECTS

Pollify, a social media platform, Web Project

Pollify is a social media platform developed by 2 computer science students, that allows you to create a new profile or sign in with an existing one. You can add, edit or delete a poll (post), check other's polls, vote (live % results) and discuss them in the comment section. Pollify gives you a feature when creating a new poll, to check if you want to post this poll as Anonymous. Another important feature, Pollify offers you an option when creating a new poll, to post this poll for followers only. In addition, there's an AI help center. Pollify offers many other features, like searching a user by its name from the search bar, edit your profile (personal info) as well as editing or deleting your polls, filter polls based on your interests.

Restaurant website, Web Project

A restaurant website for buying crepe, waffle and juice that shows a visitor what the restaurant offers, allows him to signup/login to place an order, in addition to receiving it as delivery. Moreover, there's an admin page that permit the admin of the restaurant to add new items.

Guessing number game, Java Project

A mini game that generates a random number, allows the user to enter a guess number with 10 attempts and compares it with the auto generated one. It gives him a warning at a specific attempt, hints him if his number is right, too close, too far, or wrong, in addition to another hints.
