+(968)79158953 || +(961)03061805 || ahmad.hosni988@gmail.com

A talented certified technical consultant, with a solid academic preparation, working on financial solutions mainly based on Java J2EE and web technologies, with the main responsibility to design and develop high reliable customizations, extensions and functionalities to satisfy clients' requirements.

Professional Experience

❖ Application Specialist/Owner (Technical Consultant)

Sohar International Bank, Muscat, Oman

Starting Date: November 2023 – Present

- Managing the transfer module within a corporate banking application, facilitating internal/external and other types of transfers, batch processing, and scheduled payments.
- Adding additional controls to ensure no financial loss for the bank.
- Providing support for clients on the initiation, authorization, and tracking of transfers, ensuring accuracy and compliance with financial regulations.
- Monitoring and resolving issues related to transfer processing, including troubleshooting failed transactions and managing error handling procedures.
- Managing design sessions for integration with other parties(core/middleware/payment hub/treasury) to ensure all transfer flows are handled properly.
- Engaging in client discussions to understand their corporate business requirements.
- Collaborating on technical strategies and designs for implementation.
- Conducting comprehensive testing to validate developed solutions.
- Creating release documentation for seamless deployment.
- Overseeing the production deployment process.

❖ Technical consultant

IBC Solutions (In partnership with Finastra), Beirut, Lebanon

Starting Date: September 2021 – November 2023

- Offering technical consultation for financial solutions leveraging Java J2EE and web technologies.
- Contributing to design tasks for system customization and extensions to meet specific requirements.
- Undertaking advanced development, configuration, and parameterization tasks as per assigned directives.
- Collaborating with clients to refine requirements aligned with system design and capabilities.
- Spearheading system customization development and implementation efforts.
- Delivering user training and providing both online and onsite support, aiding in troubleshooting and design enhancement.
- Managing data migration and facilitating seamless application integrations.

- Crafting detailed Technical Solution Design Documents (TSDDs) for clients, outlining system design and functionality to ensure project success.
- Assisting in production releases to ensure smooth deployment processes.
