Education

Antonine University

2023 – Present

Bachelor in Computer Science

Selected Projects

E-Services Platform | *PHP, Laravel, MySql*

May 2026

- Developed a web-based eServices platform using Laravel and MySQL following the MVC architecture.
- Created CRUD operations for managing system data and integrated form validation.
- Designed responsive user interfaces using Blade templates, HTML, CSS, and JavaScript.

Task Management System | *C#, .NET*

May 2026

- Developed a RESTful Task Management System using ASP.NET Core Web API and Entity Framework Core.
- Implemented user authentication and authorization using JWT tokens and role-based access control.

Car Price Prediction | *Python*

May 2026

- Build machine learning models using supervised and unsupervised techniques to predict used car prices.
- Conducted data analysis and visualization using Python (Pandas, Matplotlib, Scikit-learn ...).

Gender and Age Detection | *Python*

May 2025

- Developed a model that uses machine learning to predict the gender and approximate age of individuals based on their facial images.
- Implemented using deep learning techniques and a dataset of facial images for training to achieve accurate predictions.

Money Transfer Mobile App | *React Native*

September 2025

- Developed a mobile application using React Native for peer-to-peer money transfers.
- Designed a clean, user-friendly interface for sending and receiving funds.
- Implemented secure transaction flow and user authentication.

Technical Skills

Languages: Python, Java, C++, C#, HTML, CSS, JavaScript, PHP, SQL, React JS, React Native, .NET

Developer Tools: VS Code, Eclipse, IntelliJ IDEA, Google Colab, Figma

Technologies: Linux, GitHub, WordPress, Azure Devops
