Full-Stack Developer — PHP / Laravel / Symfony / WordPress

Full-stack developer with two years of experience delivering production web and e-commerce platforms using Laravel, Symfony, and WordPress. Led client-facing builds end to end, from a healthcare platform with AI-assisted diagnostics to an e-commerce site that grew monthly sales 35% in its first month. Comfortable owning a project from requirements through deployment, and currently broadening into QA automation to strengthen release quality across the stack.

EDUCATION

Antonine University, Beirut, Lebanon <i>Bachelor of Technology in Computer Science</i>	02/2022 – 05/2025
--	--------------------------

EXPERIENCE

Tawwer, Beirut, Lebanon <i>Full-Stack Developer</i>	06/2024 – present
---	--------------------------

- Led full-stack development for multiple client projects using Laravel and WordPress, delivering fast and responsive websites tailored to client needs.
- Led a 2-person team to build tawwer.tech, the agency's own site, including a custom admin dashboard and API integrations.
- Designed and developed Dentix, a platform where doctors log in, manage patients, and track dental operations tooth-by-tooth — including AI-based oral cancer detection, subscription-based registration, appointment scheduling, and medical file attachments.
- Built Supplement Station (supplement-station.com), a gym supplement e-commerce platform with seamless product and transaction management, boosting monthly sales by \$2,000 (35%) in the first month.
- Built two WordPress-based e-commerce storefronts, Nasmah (nasmah.store) and Naseem (naseem-perfume.com), each with a custom theme and streamlined shopping experience.
- Developed Armacadabra (armacadabra.com), an informative, dynamic website for a neon raw materials business with tailored content sections and responsive layouts.
- Enhanced product search and filtering, reducing user search time by 40% and increasing customer satisfaction.
- Optimized site performance and purchasing workflows, contributing to increased engagement and repeat visits.

Obsoft, Beirut, Lebanon <i>QA Automation Intern</i>	11/2025 – present
---	--------------------------

- Wrote user stories and Given-When-Then acceptance criteria, and designed UI/functional and integration test cases aligned to business requirements.
- Wrote and executed UI test automation scripts using Playwright (JavaScript), covering core workflows and validation scenarios.
- Built cross-functional testing exposure that complements full-stack delivery, from requirements review through release validation.

Obsoft, Beirut, Lebanon <i>Full-Stack Developer Intern</i>	02/2024 – 05/2024
--	--------------------------

- Developed RESTful APIs using Symfony 7 and API Platform, following best practices for resource management, serialization, and documentation (Swagger).
- Designed and implemented CRUD operations with advanced features such as pagination, filtering, sorting, and custom endpoints.
- Worked with Doctrine ORM to model complex database relationships (OneToMany, ManyToMany), manage migrations, and perform optimized queries.
