

AHMAD NAIM

Junior Software Engineer | Full Stack Developer

Beirut, Lebanon | +961 76 036 495 | ahmadnaim.dev@gmail.com | linkedin.com/in/ahmad-nm | github.com/ahmad-nm

PROFILE

Junior software engineer with hands-on full-stack and native mobile experience across four production-style applications, spanning database design, REST API architecture, and client-facing interfaces. Solid grounding in data structures and problem solving, quick to reason about requirements, edge cases, and system behaviour. Fast learner and looks forward to start working in collaborative teams.

CORE COMPETENCIES

- **Languages:** Java, C, C#, JavaScript, PHP, Kotlin, SQL
- **Analytical foundations:** Data Structures & Algorithms, Object-Oriented Programming, Problem Solving, Relational Database Design, MVC & Client-Server Architecture, Debugging & Root-Cause Analysis
- **Backend & APIs:** Laravel, RESTful API design, Authentication/Authorization, Role-Based Access Control (RBAC), MVC Architecture
- **Frontend:** React, HTML5, CSS3, Responsive Design, Vite, Inertia.js, Axios
- **Mobile:** Native Android (Kotlin, Jetpack Compose), MVVM, Room Database, Retrofit
- **Databases:** MySQL, SQL, Schema Design, Query Optimization basics
- **Tools & Practices:** Git/GitHub (branching, merging, conflict resolution), Linux CLI, Bash Scripting, Postman, Composer, npm, Agile-style collaborative development

PROJECT EXPERIENCE

Vent Architecture — Architecture Portfolio | *Laravel · React · MySQL*

[GitHub](#)

- Developed a full-stack portfolio website for an architecture firm using React and Laravel.
- Integrated an interactive 3D building model to showcase architectural designs and improve user engagement.
- Built REST APIs, content management features, and relational database structures for dynamic project and media management.

Darisni — E-Learning Platform | *Laravel · React · MySQL*

[Live Site](#) | [GitHub](#)

- Built an end-to-end e-learning platform covering course management, enrollment workflows, and administrative controls for courses, users, and requests.
- Implemented authentication and REST API integration connecting a responsive React frontend to a Laravel backend.

Seed2See — Full-Stack Web Application | *Laravel · React · MySQL*

[GitHub](#)

- Built a full-stack application following RESTful client-server architecture with authentication, authorization, and CRUD operations.
- Developed an administrative dashboard for managing products, categories, and user workflows.

Android Dialer Application | *Kotlin · Jetpack Compose · Room · Retrofit*

[GitHub](#) | [Live Demo](#)

- Developed a native Android dialer app using MVVM architecture, separating UI, business logic, and data layers for maintainability.
- Used Room Database for local caching and Retrofit for backend communication, optimizing contact search and call-management performance.

COLLABORATIVE DEVELOPMENT

- Collaborated with another developer using Git/GitHub feature-branch workflows: commits, merges, and conflict resolution, to maintain a stable, organized codebase.
- Applied structured version-control and code-review practices consistent with team-based software development environments.

EDUCATION

Bachelor of Science in Computer Science

2026

Lebanese University — Faculty of Science

KEY ACHIEVEMENTS

- Independently designed and delivered four full-stack web applications spanning authentication, RBAC, relational databases, and REST APIs, plus a native Android app with local persistence and remote API integration.
- Applied consistent engineering discipline — schema design, API architecture, and Git collaboration — across every project.
