SUMMARY

Software QA Analyst with two years of experience in manual testing for web and desktop applications, focusing on improving software quality by performing thorough testing and continuous process enhancement.

WORK EXPERIENCE

Software QA Analyst, Auxi, Boston, United States (Remote)

Feb 2024 — Present

- Conduct thorough manual testing for both web and desktop applications, including edge cases, to ensure functionality and identify bugs.
- Create detailed test cases based on project requirements to ensure thorough coverage of all functionalities.
- Perform regression testing to ensure that new updates do not affect existing functionality.
- Collaborate effectively with the product manager to prioritize tasks and align testing efforts with project goals.
- Utilize Jira to report and track bugs, maintaining clear communication with the development team throughout the development cycle.
- Document requirements using Confluence to enhance tracking and collaboration in the testing process.

Full-Stack Web Developer, Pixel38, Hamra, Lebanon

Jan 2022 — Dec 2022

- Collaborated on the development of a dynamic MVC wedding platform using Laravel, RESTful APIs and VueJS.
- Enhanced the website's performance and load time by optimizing the code and queries.
- Implemented and maintained payment gateway using Stripe API.
- Used queues, job schedulers and cron jobs to check for new messages, connection requests and notifications.
- Utilized eloquent ORM relationships between models.
- Developed responsive UI using VueJS components, state management, routing, HTTP requests and bindings.
- Collaborated with the project manager and QA team to ensure high quality delivery.

Full-Stack Web Development bootcamp, Codi, Beirut, Lebanon

May 2022 — Dec 2022

- Intensive web development bootcamp: ReactJS, JavaScript, NodeJS, Express, MongoDB, Laravel, SQL, LAMP stack, and Linux.
