

Hussein jaffar

Backend Developer

✉ Husseinjaafar661@gmail.com ☎ +96178942972 📍 Lebanon, Beirut 🇸🇾 Syrian 📅 1/4/1993

SUMMARY

Backend Developer with strong experience in Laravel and API development. Skilled in building scalable backend systems, integrating payment services, and developing RESTful APIs. Experienced in working with Flutter applications and real-time systems. Passionate about clean architecture, performance optimization, and delivering reliable solutions.

EDUCATION

Engineering of Information Technology

university of aleppo 

10/2011 – 07/2016

Aleppo, Syria

Studied Information Technology with a specialization in Networking, while developing a strong interest in software development and backend systems. Built solid foundations in programming, database design, and system architecture, alongside networking concepts such as protocols, network design, and infrastructure.

Completed academic projects focused on backend development, including building RESTful APIs and designing scalable systems. Applied programming skills to solve real-world problems and bridge the gap between networking and software systems. Developed strong analytical thinking, problem-solving abilities, and a focus on writing efficient, maintainable, and scalable backend solutions.

Master's Degree in Computer Network Engineering

University of Aleppo

2022 – 2024

Aleppo, Syria

Master's degree in Computer Network Engineering with a strong focus on network systems, protocols, and infrastructure.

Complemented academic studies with practical experience in backend development, including API design, database management, and system integration.

Developed analytical and problem-solving skills applicable to building scalable and reliable software systems.

PROJECTS

Booking System Project

08/2025 – 10/2025

- Developed a complete booking management system including reservation workflow and automated confirmation logic.
- Built a full tourist attractions and real-estate directory with advanced filtering, categorization, and media uploads.
- Created an Admin Dashboard using FilamentPHP with CRUD operations, permissions, roles, widgets, and data tables.
- Developed a secure RESTful API for a mobile application, supporting authentication, listings retrieval, account actions, and booking operations.
- Designed database schemas using Migrations, Seeders, Eloquent relations, and optimized queries for performance.
- Implemented secure API authentication using Laravel Sanctum.
- Applied clean coding practices and Git/GitHub workflows for scalability and maintainability.

SKILLS

Backend Development (Laravel, PHP)

Design and develop scalable RESTful APIs, handle business logic, and build secure backend systems using Laravel framework.

Database Management (MySQL, MongoDB)

Design efficient database schemas, write optimized queries, and manage data relationships for high-performance applications.

API Design & Integration

Develop and integrate RESTful APIs, including third-party services such as payment gateways and external systems.

Admin Dashboard Development

Build and maintain admin panels for managing users, content, and system operations, including role-based access control and data visualization.

Authentication & Security

Implement authentication systems, manage tokens, and ensure secure data handling and API protection.

Version Control (GitHub / GitLab)

Use Git for code versioning, manage repositories, and collaborate through commits, branches, and pull/merge requests.

Problem-solving in Backend Systems

Identify, analyze, and resolve backend issues efficiently to ensure system reliability and performance.

Efficient Code Writing

Write clean, optimized, and performant code following best practices and standards.

Maintainable Code Practices

Develop structured and readable code that is easy to maintain, extend, and debug.
