

JAWAD AL KADERY

Junior Full-Stack Developer | Laravel / PHP Backend

Lebanon | +961 70 762 935 | jawadalkadiri@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Computer Science graduate and junior full-stack developer with hands-on experience building database-driven web applications using Laravel, PHP, JavaScript, Node.js, Express.js, MySQL, Blade, Bootstrap, and Tailwind CSS. Completed practical Laravel training at CodePrimary, contributing to a real-world CMS team project with dynamic content management, admin features, media handling, and reusable website functionality. Comfortable with REST APIs, authentication, CRUD workflows, MVC architecture, Eloquent ORM, Git, and responsive interfaces.

TECHNICAL SKILLS

Backend: PHP, Laravel, Node.js, Express.js, REST APIs

Frontend: HTML5, CSS3, JavaScript, Blade, Bootstrap, Tailwind CSS

Database: MySQL, SQL Server

Laravel / CMS: Eloquent ORM, MVC, Authentication, CRUD, Filament, Media Management, Dynamic Content

Tools: Git, GitHub, VS Code, Composer, Postman

PROFESSIONAL TRAINING

Full-Stack Laravel Developer Trainee — CodePrimary | May 2026 – July 2026

- Contributed to SiteKit, a team-based Laravel CMS designed to let customers manage website content through an administrative interface.
- Worked on CMS functionality including pages, menus, website settings, media/file management, dynamic content, and Blade-based theme integration.
- Implemented and maintained Laravel features using MVC architecture, Eloquent ORM, database relationships, validation, CRUD workflows, and reusable application logic.
- Worked with Filament admin components, Git/GitHub collaboration, Composer, MySQL, and front-end technologies while developing and debugging project features.

SELECTED PROJECTS

LearnHub — Laravel Learning Management System — Built a Laravel platform with authentication, user roles, courses, teachers, enrollments, reviews, database relationships, search functionality, and an admin dashboard.

CS2 Stats Tracker — Node.js / Express.js — Developed an application integrating the Steam Web API to retrieve and present player/statistics data.

Travel & Hotel Rental System — PHP / MySQL — Built a database-driven booking platform with user authentication, reservation functionality, and an administrative dashboard.
