- **Spring 2017 – 2018**   CCNA Routing and Switching: Routing and Switching

    Essentials (CISCO).

PROJECTS

- **Senior Project:** Mobile application that allows online reservation for a barber shop appointment. The Client will choose the shop that he want to reserve. Also the barber will enter his location, which will be available to client.
The user will be able to see the nearby and available barber shops on Google maps according to his location, also the user can enter a specific location he want. If he chooses to reserve an appointment, he has to sign up, login, and then choose one of the options offered by the barber shop.
As for the barber shop owner, he will enter his location after he signs up in this application and the logged location will be available to clients. The barber will be able to receive notifications about the reserved time.
