### PROFESSIONAL SUMMARY

Recent computer science graduate with a solid grasp of web development principles and a passion for coding. Excited to kick-start my career, contribute to real projects, and grow as part of a forward-thinking team.

### WORK EXPERIENCE

#### Full Stack Web Developer Intern

August 2024 – October 2024

Mentis Nation

Beirut

- Built scalable web solutions, handling backend logic using Spring Boot and front-end interfaces with Thymeleaf.
- Designed and maintained relational database schemas to support structured and efficient data management.
- Integrated external APIs and software libraries to expand system capabilities.
- Tested and validated RESTful APIs using Postman to ensure reliable performance and accurate data exchange.

### PROJECTS

#### MUCPMS

December 2024 – Present

- Developed a centralized capstone project management to streamline the entire project journey, addressing inefficiencies caused by scattered tools and manual coordination.
- Led full-stack development: designed the database schema, implemented backend RESTful services, and developed interactive front-end pages using Thymeleaf.
- Increased project process efficiency by integrating task management, grading, meeting scheduling, project tracking, and note taking into one platform, significantly reducing the time and effort needed from both students and instructors.
- Added advanced features such as GitHub-based idea suggestions and chatbot-powered idea generation to support project success.
- Automated project report generation, enabling one-click creation of pre-filled documents — reducing reporting time by an estimated 50–60% per project across potentially hundreds of projects.
- **Contacted by the university for potential deployment; currently collaborating with faculty to prepare the system for official rollout.**

#### ChatApp

March 2024 – April 2024

- Built a full-stack real-time chat app that deepened my hands-on experience with the MERN stack.
- Created a clean, responsive UI with real-time updates using Socket.io.
- Designed endpoints and models for users, messages, and conversations.

#### NadeResto (Website)

January 2024 – February 2024

- Developed a dynamic and responsive restaurant website utilizing **ASP.NET MVC**, featuring seamless menu browsing, interactive feedback mechanisms, and secure user authentication
- Leveraged **MySQL** database integration to store and manage customer data efficiently
- Implemented role-based access control to tailor user operations and ensure robust authorization protocols

#### NadeResto (Mobile App)

May 2024 – June 2024

- Android Mobile app developed Using **Java**, enabling intuitive menu navigation, seamless addition of food items to the cart, and a robust review system for adding and deleting reviews.
- Integrated a **SQLite** database to store categories, menu items, and user reviews, ensuring efficient data management

### TECHNICAL SKILLS

**Languages** | Java, JavaScript, C#, C++, SQL

**Frameworks** | Thymeleaf, React, ASP.NET MVC, Spring Boot, Express.js, Node.js

**Databases** | MySQL, MongoDB

### EDUCATION

**B.S in Computer Science**

2025

AL-Maaref University
